Art Unit: 1623

#### **DETAILED ACTION**

### Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

**Group I**, claims 1-5, drawn to a continuous and selective inclusion separation method of a inclusion-complexing agent cyclodextrin(s), classified in class 536, subclass various.

**Group II**, claims 6 and 7, drawn to an inclusion separator comprising a reaction vessel used in the separation of an inclusion-complexing agent, classified in class 422, subclass 44<sup>+</sup>.

The inventions are distinct, each from the other because:

Inventions I and II are unrelated to one another. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, Group I is drawn to a separation method of an inclusion-complexing agent cyclodextrin(s), which is unrelated to an inclusion separator comprising a reaction vessel used in the separation of an inclusion-complexing agent, of Group II. Therefore, Groups I and II have different issues regarding patentability and enablement and represent patentably distinct subject matter, which merits separate and burdensome searches.

Page 3

Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, restriction for

examination purposes as indicated is proper.

It is noted that the two independent and distinct inventions would indeed impose an

undue burden upon the examiner in charge of this application.

Any inquiry concerning this communication or earlier communications from the

Examiner should be directed to Devesh Khare whose telephone number is (703)605-

1199. The examiner can normally be reached on Monday to Friday from 8:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, James O. Wilson, Supervisory Patent Examiner, Art Unit 1623 can be

reached at 703-308-4624. The official fax phone numbers for the organization where

this application or proceeding is assigned is (703) 308-4556 or 308-4242.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 308-1235.

Devesh Khare, Ph.D., JD(3Y). Art Unit 1623 May 23, 2003

### CLAIMS:

1. A continuous and selective inclusion separation method characterized in that, in a reaction system having at least two liquid-liquid interfaces between an organic phase of raw material containing a compound(s) to be separated and an aqueous phase of an aqueous solution of inclusion-complexing agent and between said aqueous phase and an organic phase(s) of extraction solvent(s), said compound(s) to be separated is entrapped into said aqueous phase through formation of an inclusion complex(es) of said inclusion-complexing agent with said compound(s), while said compound(s) is entrapped into said organic phase(s) of extraction solvent(s) through dissociation of said inclusion complex(es).

35

2. A continuous and selective inclusion separation method as claimed in claim-1, characterized in that a diaphragm easily permeable to said aqueous solution of inclusion-complexing agent but hardly permeable to oil droplets of said organic phases is provided in said aqueous phase to prevent the two or more organic phases from mixing with each other even with vigorous stirring.

3. A continuous and selective inclusion separation method as claimed in claim-1 or 2, characterized in that said inclusion-complexing agent is a cyclodextrin(s).

- 4. A continuous and selective inclusion separation method as claimed in claim 3, characterized in that said raw material containing a compound(s) to be separated is a raw material selected from the group consisting of indole-containing mixtures, disubstituted benzene isomer mixtures, trisubstituted benzene isomer mixtures, 2-methylquinoline-containing hydrocarbon oils, 7-methylquinoline-containing mixtures, 2,6-diisopropylnaphthalene-containing mixtures, 2-methylnaphthalene-containing mixtures, and optical isomer mixtures of pinene, limonene, menthol, mandelic acid esters, or the like.
- 5. A continuous and selective inclusion separation method as claimed in any one of claims I to 4, characterized in that at least part of a solution as the organic phase containing a compound extracted thereinto as an object of separation is withdrawn and distilled to concentrate said compound, and the organic solvent separated by distillation is returned back to the reaction system and reused as the extraction solvent.

5

10

- 6. An inclusion separator characterized by comprising a reaction vessel constructed so as to allow an aqueous phase of an aqueous solution of inclusion-complexing agent to form liquid-liquid interfaces with at least two organic phases that are an organic phase of raw material containing a compound(s) to be separated and an organic phase(s) of extraction solvent(s), and stirring means for stirring at least neighborhoods of the respective liquid-liquid interfaces.
- 7. An inclusion separator as claimed in claim-6, characterized in that a diaphragm easily permeable to said aqueous solution of inclusion-complexing agent but hardly permeable to oil droplets of said organic phases is provided in an inner portion of said reaction vessel wherein said aqueous phase is positioned, whereby said at least two organic phases are prevented from mixing with each other via said aqueous phase.

in a U-shaped tube. 6 ml of mixed xylene (commercially available product) was placed in one vertical tube of the U-shaped tube while 6 ml of n-hexane was placed in the other vertical tube. Stirring was effected in such a manner that the xylene phase did not mix with the hexane phase. The composition of xylene isomers extracted in the n-hexane phase after 2 hours is shown in Table 5.

Page 19, Example 10, please change as follows:

# Example 10

250 ml of a 10 wt. % aqueous solution of a glucosyl- α -cyclodextrin mixture was placed in an H-shaped tube. 10 ml of mixed xylene (commercially available product) was placed in one vertical tube of the H-shaped tube while 5 ml of dichloromethane was placed in the other vertical tube. Vigorous stirring was effected, provided that the horizontal pipe portion of the H-shaped tube was partitioned with filter paper. The composition of xylene isomers extracted in the dichloromethane phase after 1 hour is shown in Table 10.

### IN THE CLAIMS:

# Please amend claims 3 and 5 as follows:

- 3. A continuous and selective inclusion separation method as claimed in claim 1, characterized in that said inclusion-complexing agent is a cyclodextrin(s).
- 5. A continuous and selective inclusion separation method as claimed in claim 1, characterized in that at least part of a solution as the organic phase containing a

alport

compound extracted thereinto as an object of separation is withdrawn and distilled to concentrate said compound, and the organic solvent separated by distillation is returned back to the reaction system and reused as the extraction solvent.

#### **REMARKS**

It is not believed that the amendments above affects the scope of the claims. The claims have been amended to eliminate multiple dependencies, and place them in better form for U.S. examination.

Support for the specification changes is as follows:

In connection with the changes on page 8, various dictionaries teach that the abbreviation "LPG" refers to liquefied petroleum gas. It is not believed that this amendment effects the scope of claims.

In connection with the change on page 17, see "n-hexane" on page 17, lines 5 and 8.

In connection with the change on page 19, see page 11 lines 27-29 together with Fig. 5 and page 4 line 15 (and page 5 line 9).

Early and favorable action is earnestly solicited.

Respectfully submitted,

NORRIS MCLAUGNLIN & MARCUS, P.A.
